If you.Q: Please tell me how to solve this simple equation How to solve the following equation? $x = \frac{\sqrt{2} + \sqrt{3}}{\sqrt{2} - \sqrt{3}}$ I am using Mathematica, but it is giving absurd results. I guess I need to simplify this equation, but don't know how to do that. A: Mathematica simplifies expressions involving radicals using the option Simplify: solve[x == Sqrt[2]/Sqrt[3], x] (*x == 2*) solve[x == Sqrt[2]/Sqrt[3], x] /. x -> 1 (*True*) Prolonged treatment with everolimus in a patient with tuberous sclerosis complex and renal angiomyolipoma. Tuberous sclerosis complex (TSC) is a rare autosomal dominant condition characterized by benign tumors in multiple organ systems. Renal angiomyolipoma is a characteristic finding, but may be a cause of hematuria and recurrent pain. There are no reported cases of TSC and renal angiomyolipoma who received treatment with the mammalian target of rapamycin inhibitor everolimus. The authors report a case of a 30-year-old man with TSC and renal angiomyolipoma who had everolimus therapy for the treatment of renal angiomyolipoma. The patient's disease-specific quality-of-life questionnaire was analyzed pre- and post-treatment. The patient's quality of life improved significantly after treatment with everolimus. The authors recommend everolimus be considered

as a possible treatment option for patients with TSC and renal angiomyolipoma. Not all finished products are shipped with packaging.
