The results include new ball physics: Its trajectory is altered by the player, meaning it will move faster and more unpredictably when in contact. It is also more responsive to pressure from the ball and body. New control schemes are employed to introduce faster directional changes. The ball will look more lively on the pitch. The ball interacts with the player's body in unique ways as it changes shape. Players will receive unique behaviours as they strike the ball, depending on where the ball hits them. During gameplay, Goalkeepers will also face unique challenges during saves, and will take on a more defensive role. Their reaction times will be faster and highly responsive, and they will now focus on swipes at the ball to slow it down. This doesn't mean Goalkeepers will be a second-class citizen within the game. They will be able to use new techniques such as step-overs. FIFA 20 was the most popular edition of the series, and it achieved great commercial success. This October, FIFA releases a major update to the base game, taking gamers on another journey into the world of football, with more ways to play, more stars to unlock and a whole host of new features. In recent years, a digital video recorder having high-speed and large-capacity functions was researched and developed. As an example of the recorder having such functions, a hard disk recorder and a hard disk drive (hereinafter referred to as "HDD") are known. As one example of the HDD, a small and thin flat type magnetic disk having a diameter of 0.3 to 0.5 inch was proposed in "A 13 GB/s, 1-inch HDD with 1.5 GHz Micro-Drive Electronics" in ISSCC (International Solid-State Circuits Conference) 99 Proceedings 1999. As another example, a magnetic disk having a diameter of 1 inch was also proposed. For example, in JP-A-2002-134912, a magnetic disk having a diameter of 1 inch was disclosed. By the way, a magnetic head for a hard disk is normally provided to a slider. The slider is brought in contact with a recording surface of the magnetic disk. The magnetic head is mounted onto a gimbal. The gimbal is supported with a suspension arm. The suspension arm is attached onto a rotary actuator which is movably attached onto a housing. The rotary actuator includes
