Kuber

Founded by Suleman Shaikhanifar (ITBCourse.com, CTO and Lead developer) & Mohammad Mahdi Hadadi, Kuber is a reliable IT platform designed to help you run your business & everyday life tasks. Since its inauguration in 2013, Kuber has been helping small businesses and individuals achieve financial freedom by providing them with a comprehensive business accounting app. Headquartered in San Francisco, California, Kuber has raised $500,000 in funding from some of the prominent investors such as: Maveron, Underscore and Innovate Ventures. Applications available: Kuber consists of different applications that come integrated to assist the user with all aspects of accounting. The products available cover the accounting standards of most international organizations, including: • ACCING! for your company's financial statements • IRS Tax forms for your US business • Free PRINT for your bookkeeping year • Free INVOICE for your company's customers • Free CREDIT for your clients • Free TRN for your business transactions • Free ETRN for your business expenses • Free CAD and FREE-BANK for your company's accounts • Yearly Website with Features like online payments, e-statements and more Cyrano Platform Supported: Kuber is compatible with all Windows versions including; Windows 7, 8, 10, Server 2008 & 2012, Windows 2008 R2 & 2012 Server, Windows 2012 & 2016, Windows 2008 SP1 & SP2, Windows 10 & Server 2008 R2 SP1, Windows 2012 SP1. Kuber Requirements: Application Structure The application can be downloaded as one piece of software, and requires a working Internet Connection in order to operate properly. If you want to make it work

offline, you have to install the Internet Explorer 8, Microsoft Edge or Mozilla Firefox required by the app. VisualStudio Community Edition required to use most of the application Kuber's Digital Certificate requires Windows 8, 8.1 and Windows Server 2016 Version Requirements: The application is available in multiple languages, and the current available versions cover the following currencies: • USD / USD / EUR / GBP / CNY / JPY / XAF / AUD Kuber Compatibility: Kuber is capable of running on all Windows platforms including; Windows 7, 8, 8.1, 10, Server 2008 & 2012, Windows 2008 R2 & 2012 Server, Windows 2012 & 2016, Windows 2008 SP1 & SP aa67ecbc25

Kuber (Updated 2022)

"Kuber is a platform on the blockchain that is designed to make accounting tasks easier and more efficient by placing control of accounting records within the hands of the user." The developers of Kuber have designed their platform to be as user friendly as possible by offering easy to understand formats as well as a clean, graphically pleasing user interface. Kuber features: Profit and loss calculations Cash Flow flow analysis Creating invoices Printing sales and tracking documents Exporting data to CSV Multiple database options to choose from for a user's preference A database that's constantly evolving and growing Build an inventory system based on blockchain The user will be able to manage the daily activities in their inventory, and at the same time, will have access to an information system that's universal to the blockchain. The information in the system will have two main attributes: Record ownership data and Detail the detailed information about the inventory, such as the date, location, quantity, cost, received and delivered. The information in the system will be able to be viewed in many ways, such as a graphically pleasing, mobile friendly interface, or by reading in the user's preferred format. You can use Kuber as an organizational tool that is directly linked to your bank accounts, with certain records being viewable by the user, while other aspects, such as stock information, can be viewed by the company (e.g. the CEO or the board of directors). What has been learned so far In our tests and examinations of the app, we have seen that the functionality of Kuber is promising and can definitely serve as a means to streamline and simplify the general accounting process for everyday use. We will continue to examine the app to see what other innovations can be applied to the platform, as well as keep a watchful eye on its development. A key takeaway for 2018 is that it's not just about the product, but about how it will be used. As you can see by looking at Kuber, the app can be used as a means to streamline the accounting process by keeping track of the information in a central place. This cuts down on the time it takes to look over the documents and to compare past and present information, as well as use them to keep track of the overall financial health of the company. The app's core idea,

What's New in the Kuber?

Manage business expenses across an array of apps Covering an array of business opportunities: Keeping accurate records on how much money your company spends or brings in may be a bit difficult. If you're not used to your accounting requirements, you may forget about records and find yourself spending more time finding the time to go through and track down documents. Kuber has been designed to address this problem. Let's talk about some of the apps that this app will link to. First of all, it can be used to easily create, manage, and share invoices. Using this app, you can send invoices to users who have access to a specific app, ensuring that the money will be distributed to the correct party. Do you collect many forms of documentation about the deals you work on every day? If so, this app can help you keep track of everything you've worked on, all day long. Not only can you record income and expense transactions within it, but you can also enter various notes about the deals, which can be great for helping you track them later. What do you get when you add Kuber to the mix? You get an app which simplifies the entire accounting process. Once you sign into this app, you can generate a

unique token for each deal, which can be used to link it up with the app's financial needs. You can then choose to link up a payment or bank account within this app, and choose what kind of documents you want to receive when it's time for your company to pay you. For example, you could receive a bank transfer (of the transaction amount), a scanned copy of the bank statement, or even a credit card statement. You can also create a reference for all transactions in case you need to go back and check on them later. You can even set a specific time for which you want the app to automatically check if there is a new bank transaction, meaning you don't need to remember to check the dates of the statements yourself. In other words, it's all about money management, and this app has you covered. Kuber was made by a team of highly skilled professionals with more than a decade of combined experience in various areas of accounting. We believe in providing high quality tools, and we're willing to go the extra mile for each customer, in order to ensure their satisfaction. We invite you to browse our 'about us' page. We
